SUMMARY

Driven and analytical Data Science undergraduate with a strong foundation in programming, statistics, and machine learning. Skilled in Python, SQL, and Power BI, with experience in developing analytical dashboards, forecasting models, and data-driven applications. Experienced in conducting research across areas such as optimization methods, computer graphics, and emotion-based data interpretation. Demonstrated innovation and teamwork through hackathon participation, academic research, and industry internships, with a passion for leveraging data to solve real-world problems at the intersection of technology, analysis, and human insight.

EDUCATION

- **SVKM's NMIMS Mukesh Patel School of Technology Management & Engineering, Mumbai**
  Pursuing B.Tech Integrated in Data Science | CGPA: 3.77 / 4 *Jun 2021 – May 2027*
- **VIBGYOR High - Malad East, Class 10 ICSE**
  Percentage: 86% *May 2021*

SKILLS SUMMARY

- **Languages**: Python, R, SQL, C, C++, Java
- **ML & Data Science**: NumPy, Pandas, Scikit-learn, TensorFlow, Librosa, SciPy
- **Data Visualization**: Matplotlib, Seaborn, Power BI, Tableau
- **Web & Deployment**: Streamlit, Django, AWS
- **Databases**: MySQL
- **Platforms**: VS Code, Jupyter Notebook, IntelliJ
- **Core Skills**: Deep Learning, Statistical Modeling, Data Analysis, Model Deployment

WORK EXPERIENCE

1. **Research Intern – RE Journal** [Certificate] *Jun 2025 – Jul 2025*
   - Collected and cleaned real-estate datasets from government portals, cleaned the same using Python
   - Designed interactive Power BI dashboards tracking leased area trends and occupancy KPIs.
   - Produced analytical reports supporting data-driven client decisions in commercial property investments.
2. **Data Science Intern – InLighnX Global Pvt. Ltd.** [Certificate] *May 2025 – Jun 2025*
   - Built automated Power BI and Tableau dashboards to visualize sales trends and customer behavior.
   - Developed a full-stack hotel management system (Python, SQL, HTML/CSS/JS) with integrated booking and payment modules.

PROJECTS

1. **Train Reservation System (Data Structures & Algorithms)**[GitHub]
   Sep 2024 - Nov 2024
   Technologies Used: C++, Problem Solving.
   - Developed a C++ application using N-ary trees for train structure representation and queues for waitlist management, ensuring efficient seat allocation and dynamic waitlist handling.
2. **Audio-based Metal Classification (Machine Learning & Cloud Computing)**
   Aug 2025 - Oct 2025
   Technologies Used: Python, TensorFlow, Librosa, Django, AWS (EC2).
   - Collected and curated a custom dataset of metal impact audio recordings under controlled conditions.
   - Built a 1D CNN-based audio classification system using custom metal sound recordings.
   - Developed a Django web app for real-time audio inference and deployed the complete system on AWS.
3. **Statistical Inferencing of Audio Features for Each Emotion (Statistical Structures in Data & Inference)**
   Mar 2025 - Apr 2025
   Technologies Used: Python, NumPy, Pandas, Sklearn, Librosa, Matplotlib.
   - Conducted statistical analysis using MANOVA, ANOVA, and t-tests to infer the most influential audio features for each emotion using real-life voice recordings, after extracting features like MFCCs, pitch, tempo, and spectral properties with Librosa.

RESEARCH & PUBLICATIONS

1. **Refinement of the Existing Mid-Point Circle Generating Algorithm**
   – Proposed an enhanced algorithm for drawing symmetric circles in computer graphics using improved decision parameters to reduce redundant calculations and enhance pixel accuracy. Compared efficiency and performance with the original Bresenham's and traditional midpoint approaches.

   [IEEE Publication Link][GitHub]

2. **The Middle Man's Path: An Innovative Approach to Transportation Logistics**
   – Introduced "The Middle Man's Path", an innovative approach to transportation problems combining the simplicity of North West Corner Method (NWCM) with the accuracy of Vogel's Approximation Method (VAM). MMP delivers faster, efficient initial solutions using Plus and Cross trends, enhancing cost minimization and resource allocation in supply chain management and large-scale logistics.

   [IEEE Publication Link][GitHub]

3. **A Compendium Of The Latest Erudite Analyses Of The Shifting Intricacies Within The Bitcoin Ecosystem**
   – Published study on the Bitcoin ecosystem and examined its linkage with global markets (gold, oil, GCC stocks), assessed AI-driven forecasting models, proposed data-driven investment strategies, and analyzed blockchain security, highlighting Bitcoin's role as a hedge and diversification tool.

   [IJES Publication Link]

HACKATHONS & COMPETITIONS

1. **AgriGPT – Google Developer Groups** [Certificate]
   - Collaborated in a 3-member team to build an **AI-powered crop advisory system** using Python, integrating soil, weather, and crop data for real-time insights.
   - Contributed to **model development and analytics implementation**; received a **certificate of participation** for innovation and teamwork.
